MATERIAL DESCRIPTION

TBA Firefly carry out full hands on training courses for Passive Fire Protection Companies throughout Australia. This training provides installers with knowledge and education so that our products are installed correctly, effectively and efficiently to promote a high level of professionalism in the Fire Protection Industry. Training installations mirror the detailed construction details contained within our Regulatory Information Reports. Education of installation ensures that the end user is getting the fire protection they require with a fully compliant system. Passive Fire Protection is not just an add-on! It is a life safety building requirement and should be treated accordingly.

This is the standard of workmanship from companies which have carried out our Training Course:

Firefly Intubatt Boxout, installed by an 18 year old female trainee from QLD, under the expert supervision of Archie
